

2/8: Team Meeting 1

Overview

- Discussed how to split ourselves into teams
- UI will need to be handled first because the client wants to review it early on
- Pipeline should also be set up early on in case we run into technical issues

Group organization

- **Front End team**
 - *Design* (wireframes, mockups, sketches):
 - Aditi
 - Adi
 - *Implementation*:
 - Carlos
 - Rohit
- **Backend team** – responsible for setting up the DB -> backend -> frontend pipeline
 - Kevin
 - Alan (really does not want to use PHP)
 - Candy
- Heather will help either group depending on who needs more people
- Scheduling will come into play later, so we will regroup at that time
 - By then, the UI should be mostly in order

Deliverables

- Feasibility report – 2/17
 - *Rohit* - A statement of the task to be undertaken. A preliminary requirements analysis
 - *Aditi/Heather* - Suggested deliverables and Outline plan, showing principal activities and milestones
 - *Adi* - Process to be followed, e.g., iterative refinement, agile, modified waterfall model, phased development, etc.
 - Will need to discuss this in more detail
 - Make pros and cons of some options
 - *Alan* - Discussion of business considerations (see the [Projects](#) page on the Web site).
 - *Candy/Carlos* - Risk analysis. What can go wrong? What is your fallback plan
 - *Kevin* - Probable technical requirements
- Things to accomplish by 3rd meeting with RVR, which needs to be rescheduled during the week we return from Feb. Break

- *Front end team*: Website in graph form
 - Navigation
 - Mockups/wireframes for the design
- *Backend team*: Framework set up
 - DB schema/Backend to frontend pipeline
 - Discuss frameworks/languages/etc.

Next steps as a team

- Set up weekly meeting time for us to meet- all 8 should be present!!
- Set up a new weekly meeting time with RVR, since Tues. 4-5 does not work
- Block a chunk of time to meet this weekend to work on the feasibility report
 - Try to think about your portion of the report ahead of time and come to the meeting with ideas/rough draft
 - Have a rough draft of the report to present to RVR during meeting next week
 - Fine tune based on feedback during the week and submit to professor on Friday 2/17

Follow up questions for next meeting with RVR

- Ask RVR about how he wants to display the schedule. What is a good way to show 100+ bands playing on several different stages at several different times on a given day?
- What is the purpose of an organizer? There must be some sort of restriction with who can register to be an organizer
- Is there a need for a host (separate from musician) who can simply register his/her porch as a place for bands to play (but he/she himself is not actually part of any band)?
- How to handle multiple organizers/co-hosts?
